SAFETY CHAINS are the chains that are connected from the trailer tongue to the tow vehicle.

They are an essential piece for making sure your trailer is properly connected to your tow vehicle.

Safety chains are also necessary so that you can still safely guide your trailer and maintain control as you make your way to a safe stopping point in the event of a ball or coupler failure.

Two safety chains are required and must be attached to their own chain retainers.

ABS safety chains are available in various lengths & load ratings, & fittings. Available in Zinc & Yellow Zinc finish. All products are D.O.T certified and tested for quality.

Working load limit (WLL) is the maximum working load designed by the manufacturer. This load represents a force that is much less than required to make the product fail or yield - also knows as breaking load.

Ask your ABS sales representative about safety chain today!
